

Welcome to the 4D Installer!

To make installation as simple as possible, you have three options:

* **4D Easy Install**

This option installs 4D v11 SQL and all its complements (plug-ins, templates, etc.). This installation applies to 4D Developer Standard, 4D Developer Professional, 4D Interpreted Desktop, 4D SQL Desktop and 4D Web Application server. This package is also relevant if you only need the 4D Client expansion part of a clientserver configuration.

* **4D Easy Install + 4D Server**

Like 4D Easy Install above, this option installs all the parts of 4D v11 SQL, as well as 4D Server v11 SQL. Use this option if you have a license for 4D Team Developer or 4D Server. Launch the regular 4D application to connect to your remote 4D Server.

* **Custom Installation**

If you know which components you'd like to install, use this option to easily pick and choose amongst them. This option is useful if you need, as a developer, to install a lighter package to fit your exact needs.
