Nyssa 1 OEM Generic DX Change Log

Newest Build: TIC = 104527 V10C0505

Previous Build: TIC = 104240 V10C0487

Component: CAT-Files_Nyssa

Current Version: 1.5

Previous Version: 1.0

Changes Made:

-Addition of final valid cat files.

-Added PCIe 1Gbe cat files and AMT cat files to the component.

Component: Linux_IDER_Driver

Current Version: 0.1.5

Previous Version: 0.1.5

Changes Made:

-Removed device ID for Ophir & Tekoa FPGA

Component: NYSSA1_RIS_INF_32E

Current Version: 1.0.0.0

Previous Version: 1.0.0.0

-SCR 43668: Nyssa 1 DCN 123: Create x64-bit RIS inf

Root Cause: The EM64T RIS INFs require NTamd64 decorations on the NDI sections. Initial testing did not expose this requirement because the in box driver provided by the OS was being used with out our knowledge.

Resolution Notes: efe5b32e.inf, e1e5132e.inf and e1g5132e.inf have all been updated to include NTamd64 decorations to their NDI sections. RIS readme has been corrected to correctly state that the RIS infs must go in the amd64 and ia64 folders not the i386 folder.

Component: SNMP_Linux_Intel

Current Version: 1.8.8f

Previous Version: 1.8.8f

Changes Made:

- All non-binary files were in DOS mode. Converted to Unix mode.

Component: TEKOA_SW_KCS_Driver_Linux

Current Version: 1.0.9

Previous Version: 1.0.9

-SCR 45049: Linux KCS: Kernel panic when an H/I ISVS command is interrupted

Resolution Notes: SCR 45049: Missing test for NULL pointer in transaction_end

Component: UNIX_Linux_NWOphir_8254x_Intel

Current Version: 6.0.54

Previous Version: 6.0.54

- SCR 45445: e1000: driver install contains Northway references
Root Cause: Neglected to remove some Northway device ids
Resolution Notes: Removed Northway and Ophir IDs from pci.updates file. Also fixed up e1000_main.c with no Ophir ids
- SCR 45428: Nyssa1: e1000: 6.0.52: kernel panic with bridging
Root Cause: Driver was deferring the skb of the last transmitted packet for so long, when removing the driver module, it crashes.
Resolution Notes: The deferred skb is cleaned within 3 seconds - worst case which solves the issue.

Component:	Unix-FreeBSD_Lake_Texana_8259x_Intel
Current Version:	1.0.17.1
Previous Version:	1.0.17.1

- SCR 45441: FreeBSD IXGB: Readme refers to Northway & Ophir

Component:	UNIX-Linux_8255x_Intel
Current Version:	3.4.8
Previous Version:	3.4.8

- SCR 44770: Trademarking needs to be fixed
Additional Notes: Integrating new IE component to fix this SCR. There are no changes to the driver other than the version number bump.

Component:	Unix-Linux_Lake_Texana_8259x_Intel
Current Version:	1.0.95
Previous Version:	1.0.95

- SCR 45105: ixgb: driver misidentifies phy on pSeries, skipping workarounds
Root Cause: Routines were not correctly byte-swapping with cpu_to_le16 or the reverse when on pSeries IBM machines.
Resolution Notes: Fix was to correctly byte swap all return values from ixgb_get_ee_* accessor functions. The only functions used by the Linux driver are ixgb_get_ee_device_id, and ixgb_get_ee_part_number (which is then stored and never used)

SCR	Customer Bug #	Title	Fixed-In Component
43668		Nyssa 1 DCN 123: Create x64-bit RIS inf	NYSSA1_RIS_INF_32E
44770		Trademarking needs to be fixed	UNIX-Linux_8255x_Intel
