

SnapMeasure 2.01 CS5 Read Me

In Illustrator CS5, the white rulers that run along the top and left side of a document window can be of two types: *artboard rulers* (with origin points independently settable for each artboard) and *global rulers* (with one origin point for all artboards). **SnapMeasure** 2.01 knows when you switch between artboard and global rulers, but it can't always detect which kind of ruler is active to begin with. As a result, point and handle coordinates (shown when in Hovermeasure mode) may appear in the coordinate system of the other kind of ruler. If this happens, press the right bracket key ("]") to switch the ruler system which **SnapMeasure** is using.
