

## Softball / Baseball Team Calculator v3.71

### **1 GENERAL INFORMATION**

Thanks for downloading the **SBC** !

Version 3.70 incorporates enhancements and fixes over the 3.60 release. Version 3.71 is a maintenance release with a fix for line scores on box score summary web page and printing. The **SBC\_RH\_ER\_v3.71.pdf** file details the changes, revision history and known errata.

The **SBC** represents hundreds of hours of development and testing. If you find the program to be useful, a donation via PayPal would be appreciated ! The **SBC** website at: <http://sbc.aces-softball.com/> has instructions for donations.

The **SBC** website at: <http://sbc.aces-softball.com/> has a quick overview of the program features under the **HIGHLIGHTS** tab. An introduction to the operation of the **SBC** can be found under the **TUTORIAL** tab.

A full user manual with detailed installation and operating instructions is available.

Comments and suggestions welcomed via email to: [support@sbc.aces-softball.com](mailto:support@sbc.aces-softball.com)

### **2 INSTALLATION**

Section 2 of the User Manual gives detailed step-by-step installation instructions.

### **3 EXCEL COMPATIBILITY**

The **SBC** is an application that runs with a legal copy of Microsoft Excel® (not supplied). A 1 GHz processor or faster is recommended for best performance.

The **SBC** has been validated in the following environments:

- Excel 2000, 2003, 2007, 2010 and 2013 under Microsoft Windows®
- Excel/X, 2004, 2008 and 2011 under Macintosh® OS X

The **SBC** has not been recently validated and may not work on older versions of Excel such as Office '97.

The **SBC** has not been validated and may not work on Excel 2016 Preview Release.

The **SBC** may not work on some internationalized versions of Excel, especially non-English versions, due to major differences in the Excel macro engines on these versions.

The **SBC** is not supported under OpenOffice®, NeoOffice®, Office365 or other spreadsheet programs due to the lack of macro support.

### **4 SECURITY SETTINGS**

The **SBC** is implemented in Excel XLM macros. On initial launch, the user will be prompted to enable the macros to proceed. The dialog posted by Excel will vary depending on the version of Excel and the current Excel security settings. To continue, enable the macro execution. If prompted, set the security settings to medium.

Some newer versions of Excel on the Windows platforms require some Trust Center security settings for the **SBC** to operate. Review Section 1 of the **SBC** User Manual for configuration details.

The **SBC** makes modifications to the team worksheet only. The only external file operations occur via user commands during creation of web page files, stats importing and creation of roster export files. The user has total control over the destination of all generated files.

The **SBC** does not perform any network operations. The **SBC** is internally password protected to prevent inadvertent corruption.

### **5 UPGRADING FROM PREVIOUS SBC VERSIONS**

The **SBC** provides forward compatibility for team worksheets that were created using previous releases.

## Softball / Baseball Team Calculator v3.71

To upgrade from a previous version of the *SBC*, simply replace the existing macros file with the **SBC\_Macros.xlm** file included in the 3.71 distribution package. When a previous team worksheet is first launched with the v3.71 version of the *SBC*, a series of patches will be applied to the worksheet. This may take some time depending on the speed of the processor, version of Excel, and the previous version number. The message bar will show the progress of the patch application processing. When all the patches have been applied, the message bar will show **SBC READY**. After the team worksheet is saved, the patches are permanent.

On first launch of a team worksheet with the new macros, some informational messages may appear depending on the version of Excel that is being used. Once the team worksheet is saved, these messages will not appear on subsequent launches.

### 5.1 One Step Web Site Changes

Version 3.60 introduced a major rework of the *One Step Web Site* command. All web pages are now generated as Responsive Design pages that dynamically adapt the content to mobile or desktop browsers. Thus, there is now only one URL per web page generated. This includes the main home page.

If you have existing team web sites, it is desirable to regenerate them using version 3.60 or later. If you have implemented user-defined links, check to insure that these links are still valid as there is only one link specification for each.
