## **Youmehub (version: 2.00.01)**

Welcome to Youmehub, the essential tool for managing your design studio workflow. This document provides late-breaking information about Youmehub. For additional information, consult the documentation included with your software, or visit [www.youmehub.com](http://www.youmehub.com)

### **System Requirements**

#### **Macintosh**

##### Hardware Requirements:

Macintosh computer with PowerPC G3, G4, or G5 processor;  
Macintosh computer with Intel-based processor;  
256MB of RAM, CD or DVD drive; Hard Disk drive, Display with resolution of 1024X768 or higher

##### Software Requirements:

Mac OS X 10.3.9 for PowerPC processors; 10.4.5 for Intel-based processors;  
FileMaker Pro 8 or higher for (Multi-User) products only

##### Network Sharing Requirements:

TCP/IP

#### **Windows**

##### Hardware Requirements:

Intel-compatible computer with Pentium III 500 MHz or higher  
250MB of RAM, CD or DVD drive; Hard Disk drive, SVGA video adapter; Display with resolution of 1024X768 or higher

##### Software Requirements:

Windows 2000 (Service Pack 4), Windows XP (Service Pack 2);  
FileMaker Pro 8 or higher for (Multi-User) products only

##### Network Sharing Requirements:

TCP/IP

### **Installation**

If you have purchased Youmehub Multi-User you will need a copy of FileMaker Pro 8 or higher software installed on your system (not included). If you intend to use Youmehub in a shared network environment it is recommended that FileMaker Server be used. Although FileMaker Pro has peer-to-peer networking capabilities, only FileMaker Server provides safe, faster hosting of your files for multiple clients and provides automated backups of your important data. Please refer to the FileMaker Pro or FileMaker Server installation and setup instructions.

With Youmehub Single-User, FileMaker Pro or FileMaker Server software is not required.

Mac OS: Copy the 'Youmehub' folder from the CD or Disk Image file to either 'Documents' or 'Shared' folder on your hard disk.

Windows: Copy the 'Youmehub' folder from the CD or ZIP archive file to either 'My Documents' or 'Shared Documents' folder on your hard disk.

If you are using FileMaker Server to host this solution it automatically opens and hosts FileMaker Pro files in the 'Databases' folder in this case copy the contents of the 'Youmehub' folder into the 'Database' folder:

Mac OS: [hard disk]/Library/FileMaker Server/Data/Databases/

Windows: Program Files\FileMaker\FileMaker Server\Data\Databases\

## Login

After you have installed Youmehub, double-click the 'Youmehub' file icon (Mac OS) or 'Youmehub.exe' (Win OS) and enter the following account name and password in the login window:

Account Name: **admin** Password: **admin** (case sensitive).

This temporary user is assigned to the admin account name, which has admin privileges. You will need to go to preferences later and remove this user account once you have created another user with admin privileges.

## Activating your License

When you have successfully logged-in a message appears telling you that you are running the software in demo mode. Demo mode entitles you to a 30 day trial of the software after which you will need to purchase a license. Click 'activate' and enter your license key found on the license card. If you purchased Youmehub as a digital download on-line, then enter the license key that was emailed to you.

## Reset Database

Youmehub comes pre-configured with example data to help you learn and understand how the system works. Before you begin to enter your own data however you may want to clear all existing example data and reset the system. Go to the preferences window and select Reset Database. Caution: The Reset Database command will DELETE all records and can't be undone!
